EXPERIENCE

Software Developer

May 2024 – Present

Enaimco

St. John's, NL

Python · TypeScript · Fastify · Azure · MongoDB · Terraform · Docker · Playwright · New Relic

- Cut deploy time from **15+ minutes to under 1** by rebuilding CI/CD around cached builds and containers.
- Originated **~90%** of CI/CD provisioning across 7 Azure environments, cutting new setup from days to minutes.
- Co-architected the company's media processing pipeline, owning its design, deployment, and production upkeep.
- Shipped core features as sole point of contact for partners and customers, prototyping and architecting to spec.
- Built internal tooling for New Relic telemetry, process monitoring, and customer-data ELT jobs.

EDUCATION

Bachelor of Science, Computer Science

Sep. 2021 – Jun. 2026

Memorial University of Newfoundland

St. John's, NL

International Visiting Student, Computer Science

Feb. 2026 – Jun. 2026

Tecnologico de Monterrey

Guadalajara, Mexico

PROJECTS

SpideyHub — Portfolio site as an in-browser terminal with tmux/vim keybindings and live GitHub repo browsing.

TypeScript · Svelte 5 · Astro · Tailwind CSS · Playwright · HTML/CSS

- Enforced **0-pixel visual drift across 30 screenshot tests** via a deterministic Playwright harness.
- Safeguarded 6 views with **700+ tests running in under 60s** by extracting framework-free modules from UI code.
- Shipped live GitHub commit and file browsing on a static site with **zero rate-limit failures** via caching.

Daily Tech Digest — A pipeline that fetches, ranks, and summarizes tech news into a digest based on interests.

Python · Gemini/Groq/OpenRouter APIs · model2vec · trafilatura · GitHub Actions · Astro

- Cut LLM tokens per run **82%** (~36K to 6.4K) by moving filtering, ranking, and summarization into plain Python.
- Distilled **~345 daily candidates** from 5 sources into a ranked 25-item read via a 4-stage relevance funnel.
- Automated a **\$0-infrastructure** daily pipeline on GitHub Actions cron with 3-provider LLM failover.
- Hardened the publish path against SSRF and LLM prompt-injection, rebuilding all facts first-party.

Legend of Arlo: The Guardian's Gauntlet — A 3D adventure game across a 136×70 -tile world with 6 GLTF models.

Three.js · WebGL · JavaScript · Vite

- Drove enemy AI with Jump Point Search over a **9,520-tile graph** using a priority queue and Manhattan heuristic.
- Generated procedural dungeons via cellular automata with graph validation guaranteeing start-to-exit paths.
- Designed a 2-state FSM blending seek, pursue, arrive, and wander steering to patrol and chase the player.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, HCL, YAML, HTML/CSS

Frameworks & Libraries: Fastify, Node.js, Express.js, Svelte 5, Astro, Tailwind CSS, Flask, Three.js

Cloud, Data & Testing: Microsoft Azure, Terraform, Docker, GitHub Actions, New Relic, MongoDB Atlas, Playwright
